

1 Vote YES on HB1079 (Senators)

Support House Bill 1079, which would eliminate cost-sharing requirements for clinically appropriate genetic testing and guideline recommended cancer imaging for those found to have an increased risk of developing cancer .

- The lifetime risk of breast cancer increases 20-49% for women with moderate risk inherited gene mutations and 50% or more for women with high-risk inherited gene mutations.
- By increasing access to genetic testing, we can empower more Arkansans with the vital information they need to make the best-informed decisions about their healthcare.
- Passage of this legislation will allow patients to better understand their lifetime cancer risk, and access recommended cancer screenings.
- Eliminating financial barriers empowers patients to make informed decisions about their health and enables early detection and prevention.

2 Thank you for passing HB1079 (Representatives)

Thank you for supporting House Bill 1079, which would eliminate cost-sharing requirements for clinically appropriate genetic testing and guideline recommended cancer imaging for those found to have an increased risk of developing cancer .
